

NEW MATERIAL

1. Count points

# of points: \_\_\_\_\_

2.

Now try to divide these points into groups of 5 before counting them:

How many groups of 5 did you count? \_\_\_\_\_

How can we count them now?

By adding: \_\_\_\_\_

By skip counting \_\_\_\_\_

Does grouping make it easier to count? \_\_\_\_\_

Should we always add or skip count? \_\_\_\_\_

Multiplication is a mathematical operation where a number is added to itself a number of times. When we count point by grouping we multiply them. To express multiplication we write:  $5 \times \underline{\quad} = \underline{\quad}$

**3.** Calculate:

$3 + 3 + 3 + 3 + 3 = \underline{\hspace{2cm}}$ , therefore  $3 \times 5 = \underline{\hspace{2cm}}$

$7 + 7 + 7 + 7 = \underline{\hspace{2cm}}$ , therefore  $7 \times \underline{\hspace{1cm}} = \underline{\hspace{2cm}}$

$4 + 4 + 4 + 4 + 4 = \underline{\hspace{2cm}}$ , therefore  $4 \times \underline{\hspace{1cm}} = \underline{\hspace{2cm}}$

$8 + 8 + 8 = \underline{\hspace{2cm}}$ , therefore  $8 \times \underline{\hspace{1cm}} = \underline{\hspace{2cm}}$

**4.**

$4 + 4 + 4 + 4 + 4 + 4 = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$

$\underbrace{4 + 4 + \dots + 4}_{16 \text{ times}} = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$

$a + a + a + a + a + a = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$

$\underbrace{a + a + \dots + a}_{12 \text{ times}} = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$

$\underbrace{4 + 4 + 4 \dots + 4 + 4}_{b \text{ times}} = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$

$\underbrace{a + a + \dots + a}_{z \text{ times}} = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$

**5.**

What would be the best strategy to count cells in each of the shapes below?

Write your answer below:

---

---

---

---

## REVIEW

Remove parenthesis:

6. a)  $a + b - (c + d) =$   
 b)  $(a - b) + (c - d) =$   
 c)  $a - b - (c - d - e) =$

7.

Calculate using the properties of addition:

$$(37 + 92) + 8 = \underline{\hspace{4cm}}$$

$$15 + 38 + 22 + 25 = \underline{\hspace{4cm}}$$

$$(34 + 22) + (16 + 8) = \underline{\hspace{4cm}}$$

8.

Calculate:

$$10 \times 10 =$$

$$10 \times 10 \times 10 =$$

$$1 \times 1 \times 1 =$$

6.

There are  $N$  pencils in the red box and  $M$  pencils in the white box. Masha took  $a$  pencils from the red box. Monty took  $b$  pencils from the white box.

a)  $N + M$   $\underline{\hspace{4cm}}$

b)  $N - a$   $\underline{\hspace{4cm}}$

c)  $M - b$   $\underline{\hspace{4cm}}$

d)  $a + b$   $\underline{\hspace{4cm}}$

## *Revisiting two – dimensional geometric shapes*

**Triangle:** 3 points (vertices) connected by 3 line segments

**Quadrilateral:** 4 vertices, connected by 4 segments

**Pentagon** (5 vertices), **Hexagon** (6 vertices), and so on.

All of them are special cases of a **polygon**: a figure consisting of some number of points (**vertices**), connected with line segments to form a closed figure.

These line segments are called the **sides** of the polygon.

### *Different types of polygon:*

**Triangle**  
No. of Sides: 3

**Quadrilateral**  
No. of Sides: 4

**Pentagon**  
No. of Sides: 5

**Hexagon**  
No. of Sides: 6

**Heptagon**  
No. of Sides: 7

**Octagon**  
No. of Sides: 8

Polygon

(All sides are straight)

NOT a Polygon

(One or more sides are curved)

NOT a Polygon

(Open, not closed)

**A Perimeter** of a polygon is the sum of lengths of its sides.

**L** = length, **W** = width, and **P** = perimeter

The perimeter of this **rectangle** is  $7+3+7+3 = 20$

The perimeter of this regular **pentagon** is  $3+3+3+3+3 = 5 \times 3 = 15$

7. The perimeter of the quadrilateral  $ABCD$  equals 19 cm. What is the length of the side  $AD$ ?

8. Sallie computes the perimeter of a rectangle by adding the length  $l$ , and width  $w$ , and then doubling this sum.

Eric computes the perimeter of a rectangle by doubling the length  $l$ , doubling the width  $w$ , and then adding the doubled amounts.

- Write an expression for Sallie's way of calculating the perimeter. Write an expression for Eric's way as well.
- Use both of the expressions to find the perimeter of a rectangle with length 30 and width 75.
- Explain why Sallie and Eric always get the same answer, no matter what the length and width of the rectangle are.

### Challenge yourself

9. Solve each word problem:

1. A line segment was split into 8 parts. Each part was further split into 5 sections. How many sections was the segment split into?

---

2. A watermelon can be balanced on a scale by  $x$  apples. An apple can be balanced by  $q$  strawberries. How many strawberries are needed to balance a watermelon?

---
