

NAME:

NEXT TIME (April 8) we will play a HeadBanz GAME again!

TOPICS: Atomic, Nuclear, Light, Color (Presentations 13 through 22).

Game description: each player receives a card to display on a headband for everyone else to see; the player cannot see it☺; during his/her turn, each player tries to guess who/what he/she is by asking questions “am I...?”; the rest of the players answer “yes” or “no”; we continue until everybody find out (and we all refreshed our memory!).

PLEASE BE PREPARED (you will have more fun if you come prepared):

- 1. During your material review, pay attention to the names and descriptions of all objects and phenomena, scientific terms and scientists names.**
- 2. Practice asking general questions like “am I a scientific term?”, “am I big?”, “am I a phenomenon?” as those will help you eliminate irrelevant topics at the beginning of the round. You may want to write down some of your questions here.**
- 3. Practice more particular questions like “am I an atomic model?” to be used at later stages of the game to narrow your possible answers. You may want to write them down here.**
- 4. The rules WILL NOT ALLOW to simply repeat other players questions, so be sure to prepare some good questions like “am I the positively charged subatomic particle?” which you would use in case you want to ask about a “proton” and “am I a proton?” has already been used☺. You may want to put these questions here.**
