

Homework 7

1. A concave mirror is filled with water. The radius of curvature is 40cm; the refractive index of water is $4/3$. Find the focal distance of this optical system.

2. A plano-convex thin lens with the focal distance of 40cm is placed on a mirror (see fig.). At the optical axis of the lens, 10 cm above the lens is a point source of light. Where is the image of the point source?
