## MATH 7 HOMEWORK 2 REVIEW

September, 252022

1. You throw a coin 5 times. What is the probability to get a) TTHTT? b) HHHTT?
2. In how many ways can one arrange 5 books on a shelf?
3. We roll two identical dice. What is the probability of getting 1 and 3 ?
4. A group of 6 club members always dine at the same round table in the club. There are exactly 6 chairs at the table. They decided that each day, they want to seat in a different order. How many different arrangements are possible? Sitting arrangement is considered different if it can't be reduced to the existing one by rotation.
5. In a computer game, a wizard is more powerful than an orc, so when a wizard fights an orc, he has $60 \%$ chance of winning. If a wizard fights one by one a group of 5 orcs, what are the chances that he will defeat them all?
6. For each of the sets below, draw it on the number line and then describe its complement
(a) $[0,2]$
(b) $(-\infty, 1] \cup[3, \infty)$
(c) $(0,5) \cup(2, \infty)$

Hint: you should have 6 number lines.
7. Solve the following inequalities, draw solution on the number line
a. $\quad-x<2$
b. $\quad 2-3 x>5$
d. $\quad 1+5 x<3 x$
e. $\quad 2 x-1<x-7$
c. $\quad 3 x+1<5 x+7$
8. Solve the following inequality: $(x+1)(x-2)>0$
9. Expand the expressions:
a. $2 x(a+2 b+3 c)$
b. $-3 y(a-a y+b y)$
c. $\left(a^{2}+2 a+1\right)(a+1)$
d. $\left(b^{2}-2 b+1\right)(b-1)$
e. $(4 x-7 y)(4 x+7 y)$
f. $\left(6 x^{2}-y\right)\left(7 x^{2}-2 x-5\right)$
10. Factor (i.e., write as a product) the following expressions:
a. $a c+a b$
b. $x^{2}+3 x^{3}$
g. $100 x^{8} y^{2}-16 x^{4} y^{6}$
c. $x^{2}-2 x-y x+2 y$
h. $a^{2}+4 a b+4 b^{2} a^{2}-2 a+1$
d. $4 x^{2}-4 x+1$
e. $4 x^{2}+16 x+2 x y+8 y$
f. $x^{2}(x+4)+5(x+4)$
i. $x^{2}-7 \quad$ Hint: $7=(\sqrt{7})^{2}$
j. $\quad a^{4}-b^{4}$ Hint: $a^{4}=\left(a^{2}\right)^{2}$
